

1. SDTC Inc employee initiates a daily scan on behalf of our client.

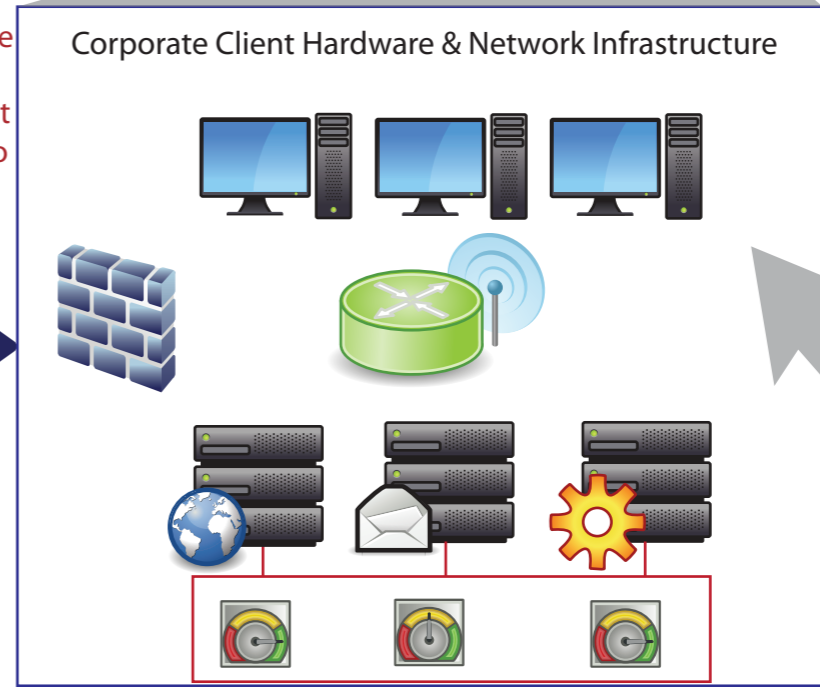

Research Engineers supplying our unique and up to date databases.

2. Scan originates from any one of our secure locations.

3. Scan travels through the internet to the client company's network infrastructure or website. The scan then probes internet facing network hardware and software to test for vulnerabilities.

Customer's Office/Facilities

Corporate Client Technician reviewing scan report

4. A Vulnerability Report is created on our secure portal. The client company employee then logs onto our portal, to review scan report.
