The Software Development and Testing Company
SecuScan Cyber Security Vulnerability Assessment Management System
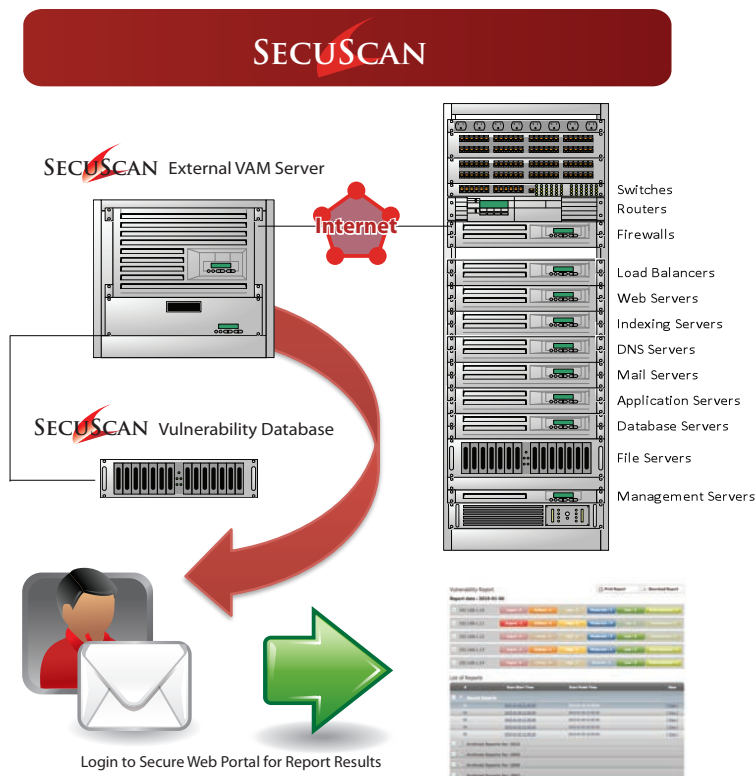

SDTC Inc

A Service Disabled Veteran and Minority Woman Owned Small Business

External Vulnerability Management System

The External Vulnerability Assessment Management System automates the task of testing and identifying potential network and application vulnerabilities so you don't have to. Reports allow security managers to quickly prioritize and remediate identified issues based on the level of risk and urgency indicated.

Prioritize and Manage Issues

The External Vulnerability Management System enables IT personnel to manage vulnerabilities and maintain control over their network and web application security with powerful graphs and proven remediation recommendations. Reports provide comprehensive details on vulnerabilities including recommended time to fix, risk rankings and urgency levels.

SDTC Inc
Developed by
The Software Development
and Testing Company, Inc.

The Benefits

- Adhere to corporate security, third party audits and outside compliance standards by automating vulnerability risk management.
- Increase consumer confidence with the certified secured website logo.
- Save time by quickly identifying high risks areas and assigning staff to follow the recommendations to fix the issues.
- No hardware or software to install or set up.
- Provide management or auditors with daily reports on the security stature of your network, web application and mission critical devices.
- Identify issues before hackers do.
- Save both time and money by automating the process of manually auditing your mission critical infrastructure.
- Easily deployable to remote offices and locations around the globe, making it ideal for large distributed organizations.
- Central report location for all divisions or geographical regions.
- Limit the cost spent on costly third party security audits.
- Improve human resource allocation.
